# NPC Foundation Introduction

Cryptocurrency that increases value through effective buyback

2 page

## THE NPC FOUNDATION HAS A CLEAR PROFIT MODEL.

Specialized in developing various components Asset Development Company NPC Foundation.

There are numerous cryptocurrencies in the world, but very few cryptocurrencies can provide a clear profit model. Whether it is a coin or a token, it is impossible to operate the cryptocurrency ecosystem without participants.

What the NPC presents is clear. It is not as difficult as the white papers of other cryptocurrencies. We present a naturally occurring token flow based on a clear profit structure and a goal that benefits all participants.

# Problems of the current cryptocurrency industry

## Question

Cryptocurrency has gone through many twists and turns since Bitcoin was born. The main purpose of Bitcoin was born to function as an independent currency, out of control by the central government or certain interest groups. Many people have a hard time understanding cryptocurrency, but you don't have to worry about it at all. You don't need to be technically familiar with cryptocurrencies, nor do you need to be aware of them as important for investment purposes. Many existing cryptocurrencies have been proud of their technology implementation with noble sentences, but NPCs question whether it is really very important.

NPC is faithful to this function of cryptocurrency, but also considered the realistic aspect.

Problems with most cryptocurrencies now that NPC thinks NPC thinks that most cryptocurrencies have a big limitation in that they only issue and cannot be used. For example, if a country has a lot of money stamped on it to use it, but no one actually accepts it, would that currency be the currency? The essential function of money is the liquidation and settlement of money. Most of the current cryptocurrencies do not really do this. Who knows the value of the currency by simply listing it on an exchange without even circulating it? A cryptocurrency that cannot function as a currency and sells and buys while listed in a transaction is like a bomb that will never explode. The dollar has become the world's key currency because it accepts and exchanges dollars anywhere in the world. After all, the money taken in the ruin is just paper. For most cryptocurrencies, it's okay to be like this.

# NPC Five principles of operation

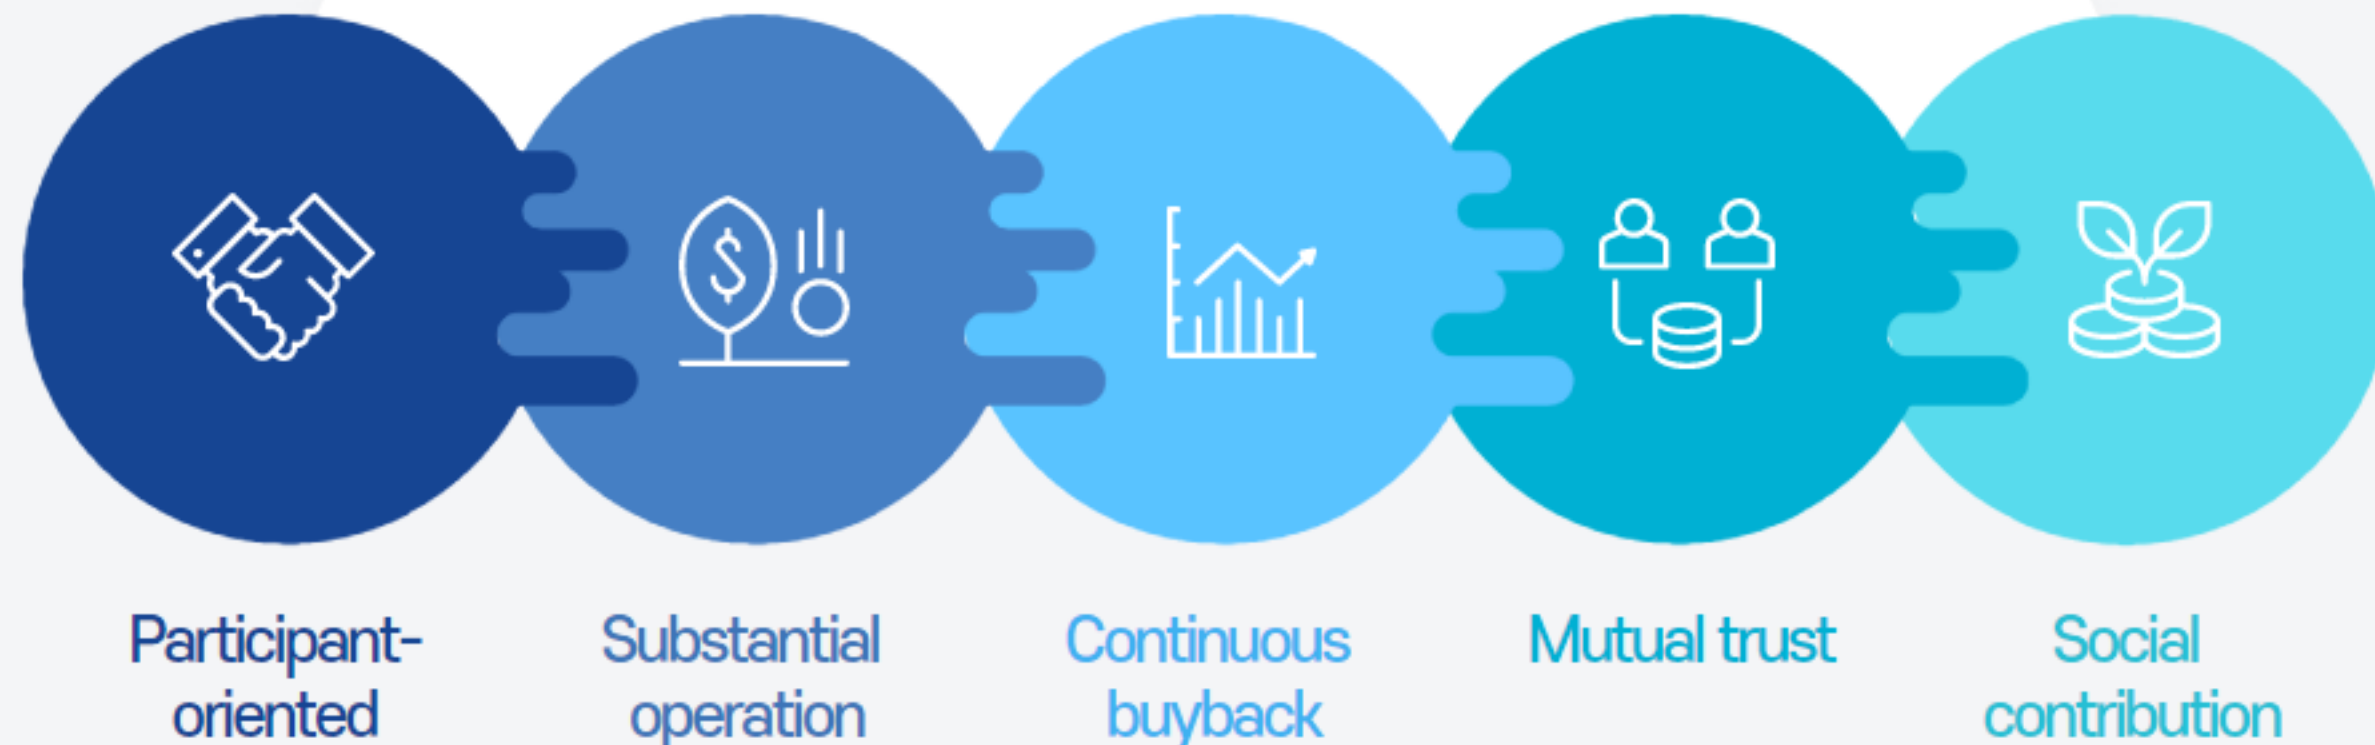

Cryptocurrency that increases value through effective buyback

4 page

NPC aims to be a token that is not difficult and has a sound effect with the tokens centered on the participants. We will strive to create a token ecosystem that provides a sense of stability to the participants by presenting a realistic goal rather than having an overwhelming plan.

## Five principles of operation

PARTICIPANT-CENTERED, HIGH TRUST, AND SIMPLE UNDERSTANDING

# NPC Token revenue model

Cryptocurrency that increases value through effective buyback

5 page

NPC's ultimate token ecosystem operation is in token buyback. The tokens that have been bought back will be incinerated, and if the profits of the participants are maximized, it will be no better. NPC does not appeal to technology innovation or real-life application like other tokens, and prioritizes the interests of participants first. Helping NPCs make a smooth buyback The business model is as follows:

The business that will lead the NPC token buyback uses its own operating funds within the foundation. If the NPC Foundation raises and operates funds from other corporations or individuals, it is illegal in some countries at home and abroad, and thus funding for the operation of the foundation will not be performed.

Some of the funds raised through Private Sale are used only for the purpose of maintaining the NPC system or funds for listing on the exchange, not for business operation. (\* NPC plans to be listed on a total of 20 exchanges since the first listing, and a total of 50 currency pairs (pairs) will be posted.)

# NPC Token's short-term strategy and goals

Cryptocurrency that increases value through effective buyback

7 page

NPC has established both long-term and short-term strategies for investment management. The short-term strategy is to conduct stock trading and futures trading, while the long-term strategy is a promising company that will invest in venture capital and generate returns. Businesses established with short-term strategies have relatively low profits, but pursue fast buy-backs based on stable management, while businesses with long-term strategies are slow but can earn large profits.

NPC prioritizes the interests of the participants. If we prioritize the interests of the participants, we know that NPCs must first settle in the cryptocurrency industry and become popular with cryptocurrency participants around the world. NPC aims to be ranked 100th within a year based on coin market cap.

# NPC Advantages of the token profit model

Cryptocurrency that increases value through effective buyback

8 page

## Sustainable revenue through proof of token holding

- NPC participants continuously generate profits through token holding
- Revenue monitoring through transparent token flow
- Stable linkage with other systems

## Holding NPC tokens is like holding bonds.

- Since holding NPC tokens is like holding bonds, you can enjoy a steady buyback event. (\* Like STO, holding a token does not mean holding a stake.)

## There is no need for unnecessary marketing or MM. (Market making)

- Most of the funds flowing in the ecosystem are real transactions
- System performance improvement and maintenance ecological fund unnecessary
- Continuous statistical data aggregation

# NPC Advantages of the token profit model

## ECONOMY depends on the basic principles of supply and demand.

All economic principles depend on the principles of supply and demand. What everyone can do is less scarce and there is little demand, but if there is something that only myself can do, supply is small, but demand is enormous compared to supply, so the scarcity will be indescribable. The ecological structure of NPC tokens was designed based on these simple economic principles.

There is no need to maintain an unnecessary cooperative relationship with other cryptocurrencies to build a token ecosystem and token infrastructure in a form that cannot be imitated. Rather, the scarcity of tokens held by NPC holders is so limited that participants from other token ecosystems want to participate.

## NPC TOKEN. DEMAND >>> SUPPLY

- Token issuance is limited, so the value of the tokens is continuously increased.
- There is no need to focus on unnecessary advertising and publicity in these situations.
- The foundation can focus its power on building a solid token ecosystem.

# Token distribution

Cryptocurrency that increases value through effective buyback

11 page

## NPC TOKEN Distribution

Total issuance: 10,000,000,000 NPC

Estimated amount of incineration through buyback:  
2,000,000,000 NPC

Planned incineration amount excluding buyback:  
5,000,000,000 NPC

At the end of the period, remaining coin circulation:  
3,000,000,000 NPC

Distribution ratio%

1. Participants: 50%
2. Foundation: 20%
3. Partnership: 10%
4. Reserve quantity: 20%

# NPC Token ecological cycle

Cryptocurrency that increases value through effective buyback

12 page

Based on the nation's top-notch planning, construction, and operation capabilities, we will continue to grow our own token ecosystem and diversify the types of profits of participants.

## NPC participation or operation

We continue to buyback tokens by investing in promising companies at home and abroad and operating our own funds within the foundation.

## Status board report

When you enter the bank branch, you will see an exchange rate display that assesses the value of money in real time. In the same way, NPCs will introduce and announce a system to assess participation value.

## Continuous virtuous cycle

For NPCs based on profit, the flow of tokens of participants is moved through the buyback system of the Foundation, and the transaction volume of tokens increases or decreases in proportion to the expected profits.

## Token transaction

Holders who hold tokens earn revenue through buybacks from the foundation. Accordingly, holders who are aiming for a market price difference can freely transfer them to others.

NPC tokens will continue to progress according to milestones without changing the plan and consistency. Unlike other cryptocurrencies, NPCs do not need to focus all their power on the sales power of technology and infrastructure construction. We plan to achieve milestones based on adherence to the structure and basics of the sustainable profit structure of NPC. We will continue to operate the foundation without losing the original intention to build a healthy ecosystem of NPC.

# FAQ – Frequently Asked Questions

Cryptocurrency that increases value through effective buyback

16 page

## Was there a cryptocurrency in which an ecosystem was created with the main purpose of buying back?

It is probably the first token among existing cryptocurrencies to create an ecosystem through periodic buyback. NPCs manage their own foundation operating funds and buy tokens in the exchange for a portion of their profits. It can be verified with Etherscan's TXID as proof that the token was purchased. In addition, you can check all investments and series of investments on the foundation website and other forums and communities.

## Is NPC token an STO (security type) token?

The question that many people ask is whether NPC is an STO token. Not the answer. STO tokens divide their stakes like a general company and receive the result according to the percentage of the stake, but SPAC is not an ecological structure in which the equity type is formed. Under domestic law, STO tokens are subject to the Securities Act and also to the Crowd Funding Act. Domestic regulatory authorities have banned ICOs in principle, and STO tokens are also not allowed. The NPC is operated by the Foundation with its own operating funds, and holding NPC tokens does not mean holding the foundation's own stake.

## Are NPC tokens sustainable?

Sustainable means that if it is not temporary, there is a steady trade. In this sense, NPC tokens will be tokens with a high possibility of operating sustainably. The first reason for that basis is the flow of ecological funds that can generate steady profits. Just as the human body dies without bleeding, tokens also die when trading is not active and rigid or insufficient. However, NPC is a token with very high sustainability as it will be actively traded in a real revenue stream, not a token based on temporary marketing.

# Legal Notice–NPC complies with laws and regulations.

Cryptocurrency that increases value through effective buyback

17 page

NPC complies with all laws and regulations. NPC wants participants to understand and participate in the clear token ecosystem flow. NPCs do not conduct business with illegal groups or individuals. It is stated that NPC is not responsible for any irregular business or illegal activities that proceed without agreement with NPC and has no relationship. Please note that all policies and decisions will be officially published through the Foundation's website. The standards of all NPC information are based on this official white paper.

NPCs are operated only in the form of the profit model shown in the white paper. However, after sufficient discussion with the participants, the plan will be changed, and the changed plan will be revised in the white paper and official website. NPC tokens are not regulated by the Securities Act and CrowdPending Act of Korea.

Participants are fully aware of this legal notice, and NPCs are informed that they are fully aware of this danger. Private sales of NPCs, IEOs, or token holders through exchanges are not considered as holders of project shares in any case. It also informs you that you cannot participate in the project decision process. The holding of tokens is not construed as granting the right to vote for the operation of the foundation, consent to or object to the work carried out within the foundation. Buyback ecosystem based on NPC's goal of business model may require relevant licensing and approval in countries and jurisdictions to achieve results.

Project activities may be constrained or delayed. This means that not all roadmap developments and goals described in the white paper are guaranteed. In addition, the project can be carried out according to the Foundation's milestone, but some projects may be reorganized or reduced. Direct or indirect progress during the project activity, and technical alliances can be established through a third party or company. Therefore, NPC makes no representations or warranties with respect to any plans, future projections, achievements of the prospects or rationality.
